

from the book **PRACTICAL PALEO**  
guide to: gluten

What is it? Gluten is a protein found in wheat, rye, oats, and barley. Gluten is the composite of a prolamin and a glutelin, which exist, conjoined with starch, in the endosperm of various grass-related grains. Gliadin, a water-soluble, and glutenin, a water-insoluble, (the prolamin and glutelin from wheat) compose about 80% of the protein contained in wheat seed. Being insoluble in water, they can be purified by washing away the associated starch. Worldwide, gluten is a source of protein, both in foods prepared directly from sources containing it, and as an additive to foods otherwise low in protein.

**i am allergic TO GLUTEN**

I have a severe allergy and have to follow a STRICT gluten-free diet.

I may become very ill if I eat food containing flours or grains of wheat, rye, barley, or oats.

Does this food contain flour or grains of wheat, barley rye, or oats? If you or the chef/kitchen staff are uncertain about what the food contains, please tell me.

I CAN eat food containing rice, maize, potatoes, vegetables, fruit, eggs, cheese, milk, meat, and fish as long as they are NOT cooked with wheat flour, batter, breadcrumbs, or sauce containing any of those ingredients.

Thank you for your help!
